SUMMARY

Frontend Developer and 4th-year Computer Science student specializing in React and Next.js, with hands-on experience building and deploying full-stack web applications using Supabase and modern React ecosystem tools.

EDUCATION

B.Sc. Computer Science, Faculty of Computers & Information 09/2023 – Present
Cumulative GPA: 3.45 / 4.0 (through Year 3), Relevant coursework: OOP, Data Structures & Algorithms (C++) Egypt

TECHNICAL SKILLS

Languages & Core JavaScript (ES6+), TypeScript, HTML5, CSS3	Frontend & UI React, Next.js, Tailwind CSS, Styled Components, React Router, Responsive Design
State, Forms & Data Zustand, TanStack Query, React Hook Form, Zod, Redux Toolkit	Tools & Backend Supabase, REST APIs, Git, GitHub, Vite, Postman, Axios, AI-Assisted Development

PROJECTS & EXPERIENCE

- Exam.io — Full-Stack Examination Platform, *Live Demo*** [🔗](#)
- Built a production-ready multi-role (Student, Instructor, Admin) exam platform with real-time anti-cheat, deployed on Vercel.
 - Engineered an anti-cheat engine using a custom useAntiCheat hook that detects tab switches, dev-tools access, and blocked shortcuts — auto-submitting after 3 violations.
 - Designed a 3-step exam wizard with a Context-based state machine supporting both create and edit modes, backed by a normalised Supabase schema.
 - Applied route-level code splitting via React.lazy() and manual vendor chunk splitting in Vite, reducing per-route bundle size to under 24 kB.
- Tech Stack:** React 19 • Vite • Supabase • TanStack Query • Tailwind CSS v4 • React Hook Form • Framer Motion • Vercel
- Online Bookstore — E-Commerce Web Application, *GitHub*** [🔗](#)
- Engineered a full e-commerce storefront with role-based access (User & Admin), search, category filtering, and pagination — deployed live on Netlify.
 - Built a cart and wishlist system with quantity management and stock enforcement, persisted across sessions via localStorage using custom hooks.
 - Optimised rendering performance with React.memo, useMemo, and useCallback, and reduced initial bundle size via route-level lazy loading.
 - Integrated REST API endpoints via Axios with async state handling, loading skeletons, and error boundaries for a production-quality UX.
- Tech Stack:** React • Vite • React Router • Context API • Axios • React Hook Form • CSS
- Areej — E-Commerce Storefront, Freelance Client Project (Present), *GitHub*** [🔗](#)
- Designed and deployed a normalized 7-table PostgreSQL schema on Supabase across 8 migrations, with row-level security and role-scoped access policies (guest, customer, admin).
 - Implemented server-side security via Postgres RPC functions, including price recalculation that rejects client-submitted values.
 - Directed a structured AI-assisted development workflow using Cursor, authoring project-specific rule files and coding standards upfront.
- Tech Stack:** Next.js 16 (App Router) • React 19 • TypeScript • Supabase (Postgres, RLS, RPC) • TanStack Query • Tailwind CSS v4 • shadcn/ui • Cursor (AI-assisted development).
